TESTIMONIALS

Let's hear it from our client!

Thomas Anweiler
Operations Manager

When we first discovered ERPNEXT, we were very excited to start transitioning our business over from QuickBooks, but lacked the technical knowhow to make everything work the way we needed ourselves. Sanskar Technolab's Karan and his team have quickly been able to customize workflows and created beautiful print templates based on our requirements. They have provided clear communication throughout, and provided expert information so we can make the right decisions as we customize the software. We are excited to continue on working with Karan and his team and thinking of new ways to utilize ERPNEXT!

I would like to first highlight the difficulty faced during the implementation of ERPNext with customization to suit our product and process requirements.

We started our implementation one year back with one of our consultant, but due to the lack of experience in ERPNext development, modules customization, and knowledge of product and process, they are not able to developed ERPNext and completely failed to implementing in our organization, and due to this, we are only able to use ERPNext for Purchase and Sale entry purpose, rest of the things we were forced to do with the Excel, and decided to migrate to different software or consultant.

During our search, we came to know about Sanskar Technolab, where we had an opportunity to working closely with ERPNext developers and consultants, we were able to fine-tune the modules to align perfectly with our workflows and business requirements. This level of customization not only improved user adoption but also optimized our processes, eliminating inefficiencies and redundant tasks. The ability to tailor ERPNext to our exact specifications has been invaluable in driving operational excellence and achieving our strategic objectives.

The implementation process itself was seamless, thanks to the expertise and guidance provided by the Sanskar Technolab team. They meticulously understood our business requirements and tailored the system to suit our specific needs. From customization to integration, every step was executed with precision and professionalism.

I Personally want to thanks all of the Sanskar Technolab team for the prompt response, extended support and actively understanding and resolving our issues.

Basant Kumar

Production Manager, Efra Industries LLP

We Advantis Quartz LLP is a manufacturing unit of Artificial Stone at Udaipur Rajasthan. To run a manufacturing unit in smooth and efficient manner integration of all processes is must and for that we were looking for an application that address this issue. We needed a solution that would merge all departments from Finance to Manufacturing and which would integrate with Inventory, Sales, Purchase, and Warehouse etc. and in this sequence & with our considerable experience with numerous accounting software packages, ERPNext has found to be the most adaptable, flexible, user-friendly, efficient, and productive to meet our requirements.

It is efficient and easily accessible, customisable for all our department and which meets our business requirement and processes. ERPNext was proposed to us as a customised ERP deliver on quality and time lines.

We were very pleased with the multiple features the ERP offers and Sanskar team made a key role in rapidly understanding our needs, identifying our business requirements and developing them in quick time. Their business understanding helped us streamline our processes and efficiently achieved our objectives. The team was dynamic and always ready to help.

The Client-based customization has made our business much more efficient, it allows us to access our data at any time from any location. The reporting functionality gives us many options for very specific areas within our organization. We have implemented ERPNext all across the Organisation. The modules include Production, Purchases, Sales, Inventory Management and Financial Accounting.

Lokesh Modi

Accounts Head, Advantis Quartz LLP

Jay Gau Mata,

Thanks for your quick support for providing us ERPNext's modules as per our needs. Completed modules provided from your team is buying, selling, manufacturing, CRM and POS. Currently we are entering our trial data, and also We are checking and working on the same. We will soon activate all modules to fulfill Ved Khillar Goshala admin purpose.

Thanks again for your great gesture.

Gomata's Blessings will always with you.
